**Manufacturer's Declaration per sub-clause 4.2.5 of IEC60950-1:**

The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided..... :

- Yes
- Not applicable

**When differences exist; they shall be identified in the General product information section.**

**Name and address of factory (ies) .....** : TDK-Lambda Malaysia SDN. BHD.  
 Lots 2&3 Kawasan Perindustrian Bandar Baru Jaya Gading, Kuantan MY-26070, Pahang Darul Makmur, Malaysia

**General product information:**

**Information about the Product:**

The equipment is a switching power supply (DIN rail type) for the use in Information Technology Equipment. The unit is intended for building-in.

Units output:  
 DRL10-12-1: 12 Vdc; 0,84 A  
 DRL10-24-1: 24 Vdc; 0,42 A

**Connection to the supply mains:**

AC input connection is provided by means of 2-way terminal block. DC output is provided by means of 2-way terminal block (+, – pole).

**Circuit characteristics:**

The EUT contains primary circuit and secondary SELV circuit which does not represent hazardous energy circuit.

**Engineering considerations:**

- operating temperature range: -20°C to +55°C, full load
- operating temperature above 55°C (derating): +55°C to +71°C, derate linearly to 60% load at +71°C (output power: 6W).

**Explanation of the test program:**

The component was tested according to the standard IEC 60950-1:2005 (2nd Edition) + A1:2009 + A2:2013 and/or EN 60950-1:2006 + A1:2010 + A2:2013 + A11:2009 + A12:2011.

Additionally the component was also evaluated according to the standards CSA C22.2 No. 60950-1:2007 + A1:2011 + A2:2014 and UL60950-1:2007 (2nd Edition) + A1:2011 + A2:2014 and fulfils the requirements of these standards.

1. The products were tested to be suitable for connection to 20 A branch circuit. The unit is approved for TN mains star connections and IT mains with 230 Vac phase to phase voltage.
2. The unit provides internally one fuse F1 in line.
3. Secondary output is separated from mains by reinforced insulation and rated SELV and is non-hazardous energy levels. Unit is for building-in.
4. The disconnect device is end product consideration.
5. The input and output terminals and connectors are suitable for factory and field wiring.
6. The transformer T1 provides reinforced insulation. These transformers are built up to fulfil the requirement of insulation class F and provide in addition an UR (OBJY3) insulation system (see also list of safety critical components).
7. The equipment has been evaluated for use in a Pollution Degree 2 and overvoltage category II environment and a maximum altitude of 3000 m.
8. A suitable Electrical and Fire enclosure shall be provided in the end equipment.
9. The product was evaluated for rated load operation for temperatures up to 55°C and for derated output load for temperature range from 55°C to 71°C, where output power linearly derates from 100% to 60% of rated load. The temperature test was performed 25 mm above bench, 25 mm below top surface without forced air cooling.
