CUS350MP-1000/A

SPECIFICATIONS (2/2)

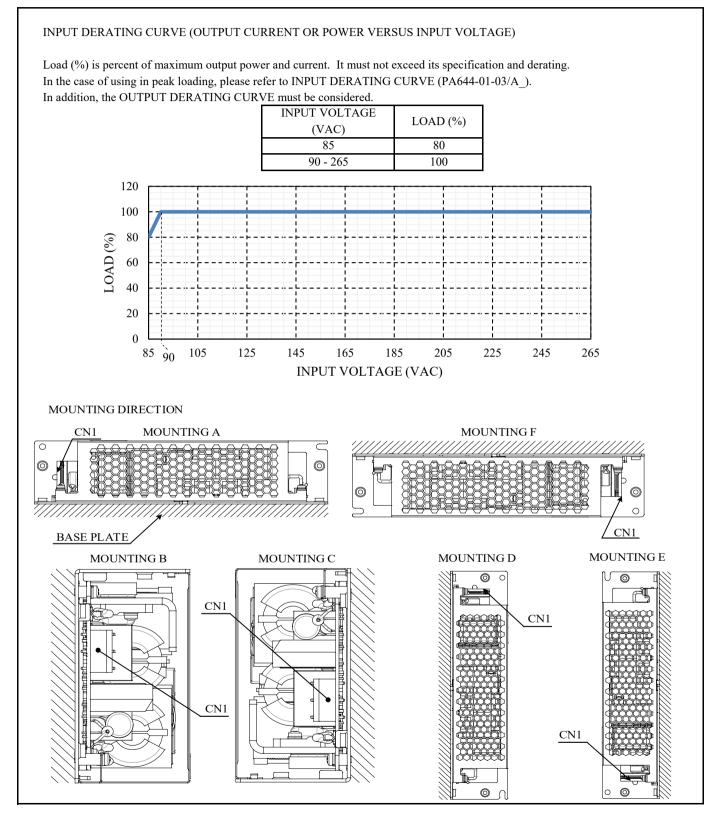

PA644-01-01/A-A

*Read instruction manual carefully, before using the power supply unit. =NOTES= *1. Continuous peak output duration must be less than or equal to 5 sec with duty not more than 45%. Peak output power for more than 5 sec will cause output to shut down and. manual reset of power supply or remote control off/on is required to re-power on. Peak loading is applicable for convection and forced air cooling. When the peak loading condition, output derating is required. For details, refer to peak output condition (PA644-01-03/A). *2. At Ta=25°C, nominal output voltage, maximum output power at convection cooling and standby supply is at no load. *3. At Ta=25°C, nominal output voltage, maximum output power at forced air cooling and standby supply is at no load. For details, refer to INPUT DERATING CURVE and OUTPUT DERATING CURVE (PA644-01-02/A). *4. At Ta=25°C, nominal output voltage, maximum output power at convection cooling and forced air cooling, and standby supply is at no load. *5. For cases where conformance is required to meet various safety specs (UL, CSA, EN), input voltage range shall be from 100 - 240VAC (50-60Hz). *6. Not applicable for the in-rush current to Noise Filter for less than 0.2ms. *7. Refer to Fig. A for measurement of Vo, line and load regulation, and ripple voltage. *8. Input voltage from 90 to 265VAC at constant output current. *9. Constant input voltage and output current from no load to maximum output current. *10. Constant current mode protection with automatic recovery. Over current condition for more than 1 sec will cause output to shut down. Avoid to operate at over load or short circuit condition. *11. Inverter shut down method. When OVP is triggered, output will be shut down, and manual reset of power supply or remote control off/on is required to re-power on. *12. Apply the appropriate measurement method according to the required standard: UL, CSA, EN and DENAN (at 60Hz), Ta=25°C. *13. For details, Refer to OUTPUT DERATING CURVE (PA644-01-02/A). *14. The result is evaluated by TDK-Lambda standard measurement condition. The power supply is considered as a component installed to an equipment. The equipment should be re-evaluated to meet its EMC directives. *15. When the input voltage is less than 90VAC, output derating is required. Refer to INPUT DERATING CURVE (PA644-01-02/A). *16. Refer to instruction manual (PA644-04-01). *17. Using 4 mounting holes on baseplate. The result is evaluated by TDK-Lambda standard measurement condition. The equipment should be re-evaluated to meet its vibration and shock requirement. *18. Output voltage setting at the time of shipment. At 100VAC, nominal output voltage and maximum output current. *19. Under Safety standard approval process. INPUT DERATING and OUTPUT DERATING (2/3)

PA644-01-02/A

OUTPUT DERATING CURVE (OUTPUT CURRENT OR POWER VERSUS OPERATING AMBIENT TEMPERATURE)

1. CONVECTION COOLING

Load (%) is percent of maximum output power and current. It must not exceed its specification and derating. The OUTPUT DERATING CURVE also must be considered at peak loading.

Ta (°C)	LOAD (%)					
1a(C)	MOUNTING A	MOUNTING B, C, F	MOUNTING D, E			
-20 - +20	100	100	100			
25	100	100	100			
30	100	100	88			
40	100	76	65			
60	30	30	20

INPUT DERATING and OUTPUT DERATING (3/3)

PA644-01-02/A

OUTPUT DERATING CURVE (OUTPUT CURRENT OR POWER VERSUS OPERATING AMBIENT TEMPERATURE)

2. FORCED AIR COOLING

Load (%) is percent of maximum output power and current. It must not exceed its specification and derating. The OUTPUT DERATING CURVE also must be considered at peak loading. Forced Air cooling condition is currently applying for safety standards approval.

Forced air cooling requires air velocity of more than 2.2m/s and air flow must be towards to C8, C9 and T1. The components must be cooled by forced air.

The power supply is considered as a component installed, to an equipment.

The equipment should be re-evaluated and make sure to meet allowable component temperature.

For allowable component temperature and further detail, refer to instruction manual (PA644-04-01_).

CUS350MP-1000/A

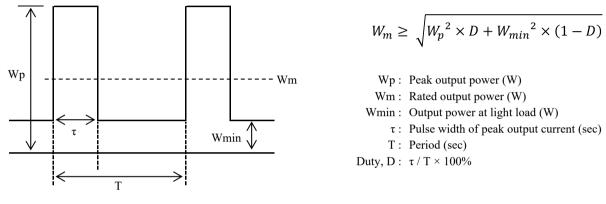

PEAK OUTPUT CONDITION (1/2)

PA644-01-03/A

PEAK OUTPUT CONDITION

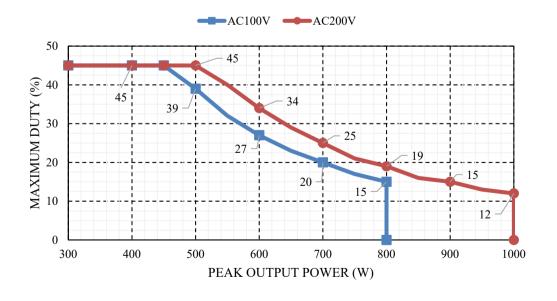

Use this product to achieve its peak output power capability according to the following expression: When the peak output power is more than 800W, pulse width of peak power (τ) must be less than or equal to 1 sec. When input voltage is less than 170VAC, output derating is required. Refer input derating curve.

Peak output codition must be considered as per following expression, input derating curve and output derating curve.

PEAK OUTPUT POWER VERSUS PEAK PULSE WIDTH

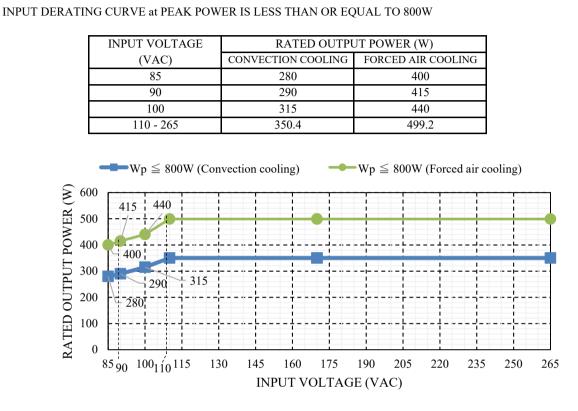

INPUT VOLTAGE	PEAK OUTPUT POWER	PEAK PULSE WIDTH	
Vin (VAC)	Wp (W)	τ (sec)	
$85 \le Vin \le 265$	800	5	
$170 \le \text{Vin} \le 265$	1000	1	

CUS350MP-1000/A

PEAK OUTPUT CONDITION (2/2)

PA644-01-03/A

INPUT DERATING CURVE at PEAK POWER IS MORE THAN 800W UP TO 1000W
