**\*Read instruction manual carefully, before using the power supply unit.****=NOTES=**

\*1. At 115VAC/230VAC, Ta=25°C, nominal output voltage and maximum output power.

\*2. For cases where conformance to various safety specs (UL, CSA, EN) are required, input voltage range will be 100 ~ 240VAC (50-60Hz).

Output derating required when Vin is less than 100VAC, refer output derating curve for details.

\*3. Not applicable for the in-rush current to noise filter for less than 0.2ms.

\*4. Please refer to Fig. A for measurement of Vo, line and load regulation and ripple voltage.

\*5. Ripple &amp; noise are measured at 20MHz by using a 150mm twisted pair of load wires terminated with a 0.1uF and 47uF capacitor.

\*6. 85~265VAC, constant load.

\*7. No load - full load, constant input voltage.

\*8. Hiccup with automatic recovery. Avoid operating at over load or short circuit condition.

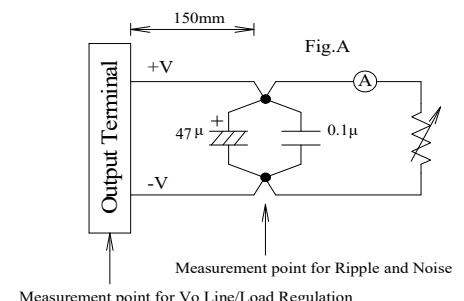

\*9. OVP circuit shut down the output, manual reset (Re power on) to get output voltage.

\*10. Measured by the each measuring method of UL, CSA, and EN (at 60Hz), Ta=25°C.

\*11. Refer to output derating curve for details of output derating versus input voltage, ambient temperature and mounting method .

- Load (%) is percent of maximum output power or maximum output current. Do not exceed its derating of maximum Load.

- Maximum load start up at -30°C is possible. However, it may not fulfill all the specifications.
