=NOTES=

- *1. At 100VAC/200VAC, Ta=25°C, nominal output voltage and maximum output power.
- *2. For cases where conformance to various safety specs (UL, CSA, EN) are required, input voltage range shall be from 100-240VAC (50-60Hz).
- *3. Output derating needed when input voltage less than 90VAC. Refer to INPUT VOLTAGE vs. OUTPUT DERATING (A284-01-02_).
- *4. Not applicable for the in-rush current to Noise Filter for less than 0.2ms.
- *5. Output voltage setting at the time of shipment. At 100VAC, nominal output voltage and maximum output current.
- *6. Please refer to Fig. A for measurement of Vo, line & load regulation and ripple voltage.
- *7. 90 - 265VAC, constant load.
- *8. No load-Full load, constant input voltage.
- *9. Measured by the each measuring method of UL, CSA, EN (at 60Hz), Ta=25°C.
- *10. Constant current limit with automatic recovery. Avoid to operate at over load or short circuit condition.
- *11. OVP circuit will shut down output, manual reset (Re power on).
- *12. Convection cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (A284-01-03_).
Forced air cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (A284-01-04_).
Load (%) is percent of maximum output power or maximum output current, whichever is greater.
It must not exceed its specification and derating.
- *13. Forced air cooling with air velocity more than 0.7m/sec or 1.4m/sec.
(Measured at component side of PCB, air must flow through component side).
- *14. The result is evaluated by TDK-Lambda standard measurement condition.
The power supply is considered a component which will be installed into a final equipment.
The final equipment should be re-evaluated that it meets EMC, Vibration and Shock directives.
- *15. As for Remote Control mode, refer to Fig. B.
